On page 17 do Carmo defines the osculating plane as the "plane determined by the unit tangent and normal vectors $\alpha'(s)$ and $n(s)$ " but in Figure 1-15 on the same page he draws the osculating plane so that it touches the curve What he intends is that the osculating plane is the image of ...

Exercise 9 of Chapter 22 of Do Carmo: The set in question is a surface because it is the graph of a smooth function defined over an open set of \mathbb{R}^2 Exercise 12 of Chapter 22 of Do Carmo: The map is clearly smooth So we only need to see that it is one-to-one and its differential is always injective
