Microsoft Office 2007 also introduces a feature called Live Preview, which temporarily applies formatting on the focused text or object when any formatting button is moused-over. The temporary formatting is removed when the mouse pointer is moved from the button. This allows users to have a preview of how the option would affect the appearance of the object, without actually applying it.

For quick formatting, you may not need to go any further than the mini-toolbar that pops up when you select text for formatting. And when you get really good, you can do most of your formatting with keyboard shortcuts, never even slowing down long enough to reach for the mouse. Whichever method you use, formatting is a two-step process. First, tell Word which text you want to format by ...
