The male reproductive system consists of a number of sex organs that play a role in the process of human reproduction. These organs are located on the outside of the body and within the pelvis. The main male sex organs are the penis and the testicles which produce semen and sperm, which, as part of sexual intercourse, fertilize an ovum in the female's body; the fertilized ovum develops into a ...

Bone remodelling is an ongoing process that occurs throughout life and is dependent on the relationship between bone deposition and resorption; both of which are linked to the activity of osteoblasts and osteoclasts. After groups of osteoclasts dissolve an area of bone, the osteoblast will begin to deposit bone matrix in that area, ensuring that a blood vessel is within the region of deposition.
